

mothers for nuclear

We used to be skeptical of nuclear. Now we consider it essential to protecting our children from pollution, our landscapes from sprawl, and future generations from global warming.

By Supporting Nuclear Energy We...

Care for People

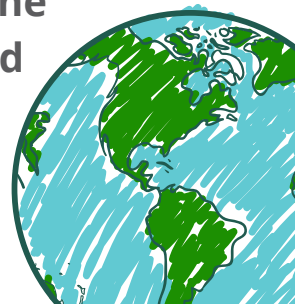

Clean, reliable energy is critical to the health and prosperity of people around the world.

Care for the Planet

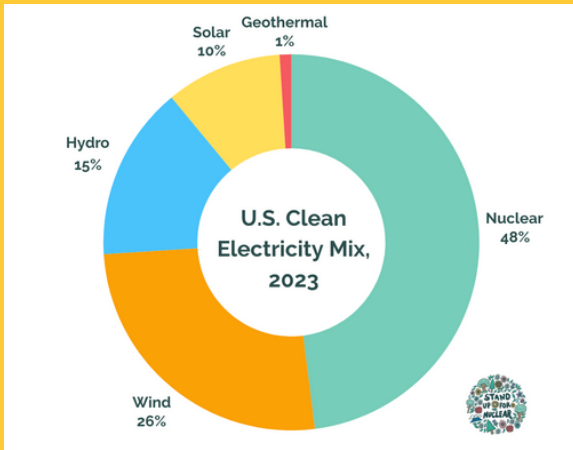

Nuclear provides emission-free power on a small footprint – clean air and more room for nature.

Act for the Future

Protect existing nuclear and use all clean energy technologies to provide the best future for people and the planet.

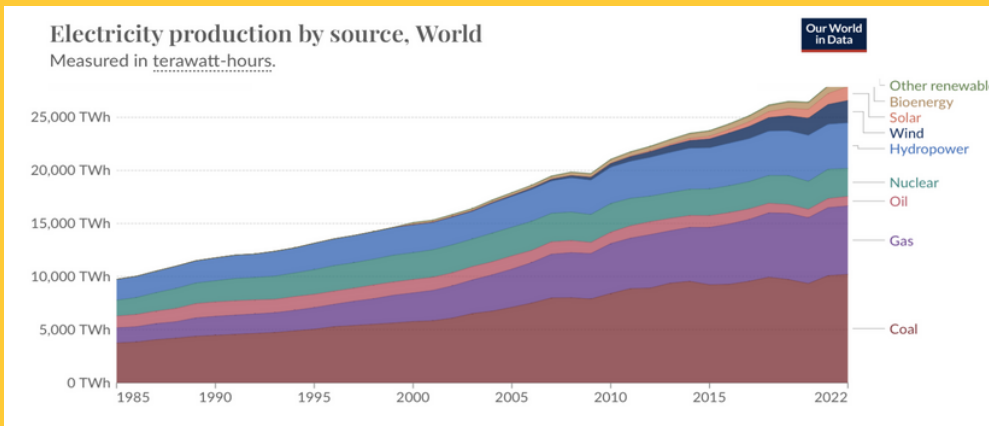

Nuclear Energy = Clean Power for All

In the U.S, Nuclear is the 2nd largest producer of electricity & is the single largest producer of clean electricity at 19%!

In 2023, our 93 Nuclear reactors produced 48% of our nation's clean electricity.

Worldwide Clean Energy is Growing but so are Fossil Fuels!

Nuclear energy's ability to provide reliable, carbon-free power makes it indispensable for driving the clean energy transition forward at the needed speed and scale

Nuclear energy is powerful, reliable, and clean!

- It produces emission-free electricity 24/7
- It has the smallest land footprint of all energy sources, including mining and inputs needed
- For the amount of electricity produced, the waste is small and containable
- Robust, long-term, and sustainable clean energy infrastructure
